

eMart Infinite App — Upgrade Report

Updated project package based on the supplied checkout screenshot and requested UI improvements.

What was upgraded

Area	Upgrade
Branding	Changed the visible NYB Infotech / legacy brand references to eMart Infinite App and eMart Infinite where appropriate.
Checkout	Rebuilt the payment form into aligned sections with delivery fields, selectable payment cards, conditional card inputs, UI
3D payment visual	Added a lightweight animated 3D payment-card treatment and floating orb using CSS, so no extra image dependency is
Support	Support button now opens a functional support dialog with Help Center, Email Support, Live Support and Order Help act
Smart search	Added quick-match suggestions, catalog-aware search, result previews, and a View All Results action.
eMart Infinite assistant	Renamed NYB Assistant and improved responses for product/service searches, including catalog-aware search navigat
Images	Added graceful image-failure handling in the new smart-search results and retained the existing external editorial image
Server	Updated API branding and added a general smart-search fallback response for assistant requests.

How to run the updated project

1. Extract the ZIP. 2. Open the project folder containing package.json. 3. Run **npm install**. 4. Run **npm run dev**. If PowerShell blocks npm.ps1, use the PowerShell CurrentUser RemoteSigned fix or run the commands from CMD.

Validation performed

The updated JSX/JavaScript files were parsed successfully, and the global CSS was parsed successfully. A Vite production build could not be completed in this Linux packaging environment because the supplied node_modules contains Windows/platform-specific optional Rollup dependencies; the ZIP intentionally excludes node_modules so npm install can recreate the correct dependencies on the target machine.

Package note

The ZIP contains the complete updated source project plus this PDF report. Existing project structure, routes, data and server files are preserved.
